# GREEN TRANSFORMERS

The Green Transformers workshop ended at the Sopot Academy of Applied Sciences - as the second stage of the project "Baltic Youth's visions, innovations and initiatives to Green Deal implemented in local communities" carried out by Polish Ecological Club together with LGF, Air-CLIM and PEIPSI CTC.

The Green Transformers workshops were carried out in an interdisciplinary formula and brought together students from various faculties of several universities in the Tri-City. The leitmotif was creative preparation for the challenges of the European Green Deal policy, characterized by the social perspective of the young generation. The next stage of the project will be implemented in the autumn and will be devoted to the promotion of the developed innovations and cooperation of universities in their implementation.

# workshop „Ecosystem”

## Let's innovate!

Visions! Innovations! Initiatives!

Be the **CHANGE** you want to see

creativity is fun!

Future could be  
**a very exciting place**

where eco-innovation  
is at heart of it!

integration and activating games

short introductory lectures...

shared discussions and "a-ha!" moments...

# Environmental problems reported by workshop participants

- air pollution
- lack of good planning of urban spaces
- fast fashion
- over-packaging
- greenwashing
- „eco-fakes”
- energy production and the level at which it continues to rely on fossil fuels
- a question of social change
- loss of biodiversity
- climate changes
- microplastics and nanoplastics
- water pollution
- overconsumption & waste generation
- waste management
- "betonosis",
- lack of green areas in the cities
- cutting down forests and destroying nature,
- the dominant role of the car in cities
- low sense of social responsibility, which directly affects our respect for the environment.
